Bhopal, India

Professional Summary

Senior Angular Developer with 6.4 years of experience building enterprise web applications across Banking and Hospitality domains. Experienced in Angular 8–19, TypeScript, JavaScript, RxJS, Standalone Components, Signals, Reactive and Dynamic Forms, State Management, REST API integration, reusable UI development, AEM–Angular integration, authentication, testing, and frontend performance optimization.

Technical Skills

Frontend: Angular 8–19, Standalone Components, Angular Signals, TypeScript, JavaScript, HTML5, CSS3, SCSS, Bootstrap, Angular Material

RxJS & State Management: RxJS, Observables, Subject, BehaviorSubject, Custom State Management, Models, Actions, Selectors, Reducers, Effects

Angular Development: Reactive Forms, Dynamic Forms, REST APIs, HTTP Interceptors, Route Guards, RouteReuseStrategy, Lazy Loading, Change Detection, Pagination

Performance & UI: Large Data Handling, On-Demand Data Loading, Reusable Components, Responsive UI, Dynamic Content Rendering, Panther UI, Storybook

Integration & Testing: AEM–Angular Integration, Jasmine, Karma, Jest, Unit Testing, SonarQube, CI/CD

Tools & Process: Git, Jira, Figma, ChatGPT, Claude, Claude Code, Agile/Scrum

Experience

Maxxton India Technologies

Sep 2023 – May 2026

Senior Technology Engineer

- Developed and enhanced enterprise Angular applications by implementing business modules, features, reusable components, and services based on functional requirements and Jira tasks.
- Worked with the existing custom state management architecture using Models, Actions, Selectors, Reducers, and Effects to manage application state and asynchronous operations.
- Developed complex Reactive and Dynamic Forms with validations to support booking, configuration, and business workflows.
- Implemented RxJS-based asynchronous data handling, REST API integration, and error handling across application features.
- Worked with Angular Signals and developed reusable UI components to support scalable application features and workflows.
- Improved frontend performance through lazy loading, pagination, reduced unnecessary API calls, and on-demand data loading for large datasets and card-based interfaces.
- Handled large datasets and data-heavy tables using efficient data loading and pagination strategies to improve application responsiveness.
- Wrote unit tests, resolved bugs and production issues, and participated in code reviews, technical discussions, and mentoring activities.

IBM

Feb 2020 – Aug 2023

Associate Software Developer

- Developed and enhanced Angular applications for banking solutions, delivering UI features, reusable components, complex forms, REST API integrations, and business workflows.
- Implemented AEM–Angular integration using the project's rendering engine to load and render AEM-managed dynamic content within Angular applications.
- Engineered a local AEM-to-Angular connectivity solution during initial development to support application development and testing before the required environment was available.
- Managed application data flow using Subject and BehaviorSubject along with routing and Angular services.
- Implemented RouteReuseStrategy to support component reuse and preserve application state during navigation.
- Developed complex Reactive Forms with validations, integrated REST APIs, and used RxJS for asynchronous operations and data handling.
- Worked with HTTP Interceptors and Route Guards to support authentication and authorization requirements.
- Created reusable UI components, authored unit tests using Jasmine, Karma, and Jest, resolved SonarQube issues, and supported application maintenance and production issues.

Projects

Channel Manager – Maxxton

- Worked on an enterprise hospitality platform for managing booking and distribution workflows across multiple channels.
- Developed key business features including Distribution Channel, Allotment, Cancellation, Commission, and Payment Terms.
- Developed a multiple batch update feature with a dynamic progress popup to display the progress of batch operations.
- Implemented scroll-based on-demand card data loading, loading individual card data as cards came into view instead of loading all data during the initial page load.
- Worked on complex booking and configuration workflows using Reactive and Dynamic Forms with validations.
- Contributed reusable UI components and worked with the project's Storybook-based component setup.

CM HUB – Barclays Bank

- Developed and maintained a financial application for Barclays operations teams to calculate and validate client money transactions against predefined regulatory and operational rules.
- Developed core Angular UI modules supporting client money calculation workflows across multiple currencies and account types.
- Created complex forms and validation logic to support accurate transaction calculations and business workflows.
- Utilized Panther UI to build reusable Angular components and maintain a consistent application interface.
- Worked on feature enhancements and bug fixes based on evolving business requirements.

Digital Dispute – Barclays Bank

- Worked on a mobile WebView-based banking application for managing suspicious transaction disputes raised by customers and supporting internal dispute-resolution workflows.
- Implemented AEM-Angular integration using the Barclays rendering engine to load and render dynamic AEM-managed content within the Angular application.
- Developed a local AEM-to-Angular connectivity solution to enable development and testing of AEM-driven features before the required environment was available.
- Managed application state using routing, Subject, and BehaviorSubject, and implemented RouteReuseStrategy for component reuse and state preservation during navigation.
- Worked on REST API integration, RxJS, Reactive Forms, HTTP Interceptors, Route Guards, authentication/authorization, reusable components, and unit testing.

GOLF Forms (CPRA) – Barclays Bank

- Worked on a privacy-compliance application enabling customers to submit and manage CPRA-related privacy requests through responsive web forms.
- Developed Angular features and reusable UI components for privacy request workflows.
- Developed Reactive Forms with validations to support different privacy request scenarios.
- Integrated REST APIs and used RxJS for application data handling and asynchronous operations.
- Wrote unit tests, resolved application bugs, and addressed SonarQube issues as part of ongoing application maintenance.

Education

Rajiv Gandhi Proudhyogiki Vishwavidyalaya (RGPV), Bhopal

B.Tech / B.E. – Computer Science and Engineering (CSE)

2019

Grade: 7.26/10
